

# RABIT

## Remote AVDS Backbone Integration Tester

155-0002-01 RABIT remote kit

## Remote AVDS Backbone Integration Tester provides commissioning, updating and testing capability

**Compact Computer:** Windows 10 PC in ruggedized enclosure with modem. AVDS Client software and other test software preloaded.

**4G LTE Modem:** Connect with coverage around the world.

**Signal Generator/Tester:** DIGITAL FORECAST Bridge X\_TS Trouble Shooter can be a signal converter, format converter, and a test-pattern generator. SDI, HDMI, VGA, component, and composite video formats are supported on input and output. Any input can be converted to any available output, and all outputs are simultaneously active. Analog stereo and AES/EBU audio embedding is supported. The front of the Bridge X\_TS features a touchscreen LCD for monitoring incoming and outgoing video signals, audio levels, and SDI metrics.

### Included Cables:

- BNC to size 8 contact coax for SDI and CVBS
- HDMI to DVI for HDMI
- Audio In and Out breakout cards for stereo audio in/out
- Ethernet
- AVDS P1 to RS-232 breakout
- 9-pin RS-232 to USB (with adapter)

**Pelican Case:** Everything fits in small pelican case. Easily shipped or can be taken as carry-on.

### KEY BENEFITS

- Easy setup by customers for remote troubleshooting
- Generate and monitor signals on aircraft
- 4G LTE modem lets you remote in to aircraft around the world
- Included cables interface to IFE/CMS system
